

M Cycle Stand

Versatile cycle parking with convenient locking points for all bike types.

The M Cycle Stand is a versatile cycle parking solution for any public space, including schools, parks, workplaces, shopping precincts and more. Its distinctive design and robust construction provide a high quality addition to any set of street furnishings.

Bikes come in all shapes and sizes, from compact childrens' bikes to larger low-slung dutch styles. With its alternating arch configuration, the M Cycle Stand offers convenient three-point locking for a broad spectrum of bike designs. Three-

point locking secures the frame and both wheels, offering a substantial increase in protection against theft. The low center arch extends to meet the frames of dutch and shopper style bikes, allowing high security D-locks to reach with ease. The outer arches can then secure both front and rear wheels.

Constructed from 48mm diameter steel tubing, the stand can be supplied in a durable nylon powder coated finish, a corrosion resistant galvanised finish or full stainless steel construction.

Features

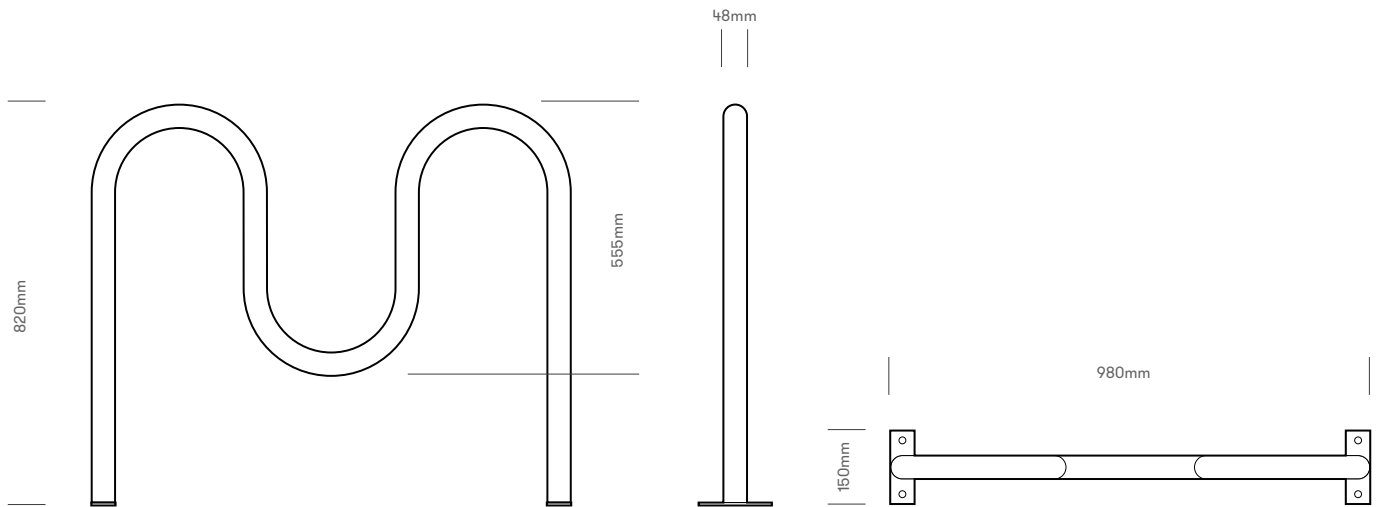

- Attractive M design
- Facilitates secure three-point locking
- Robust steel construction
- Corrosion resistant finishes
- Secure installation options
- Designed and manufactured in the UK

Options

- Surface mount with bolt-down flange
- Root fixed installation
- Durable nylon powder coated finish
- Galvanised finish
- Stainless steel construction and finish

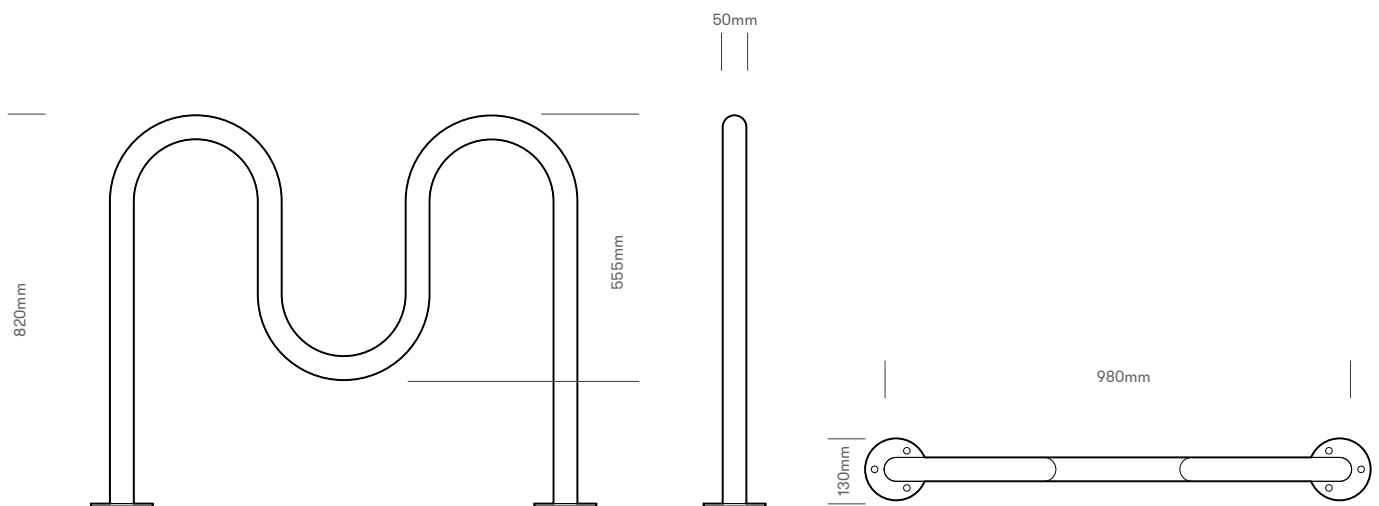

Installation

The M Cycle Stand can be mounted to existing masonry surfaces using security fixings and expanding ground anchors or threaded rods fixed with chemical adhesive. A root fixed option without flanges is also available, allowing the stand to be set into the groundwork and secured with concrete.
