

Public Bike Pump

Robust • Convenient • On-street • Outdoor • Premium

An essential maintenance facility for cyclists, engineered for the highest level of durability.

Fixing a puncture or topping up a tyre is one of the most common bike maintenance tasks, but smaller handheld pumps are often slow and difficult to operate.

With a vertical arrangement and a long stroke length, the Public Bike Pump makes inflating a tyre quick and easy, at a convenient point in the cycle journey; the perfect way to support and encourage cycling.

The Public Bike Pump is built for continuous use in outdoor public environments. The robust stainless steel bollard style construction is corrosion resistant, fully weatherproof and highly resistant to damage.

With a high quality brushed finish, the Public Bike Pump adds a premium look to any public space, from commercial centres and leisure facilities to workplaces, educational campuses and more.

Construction

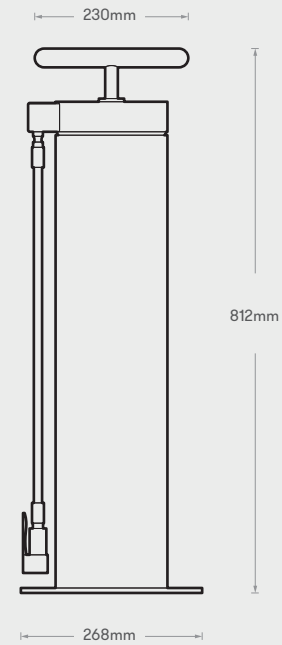

All components are designed for longevity and usability; the stainless steel piston rod is strengthened against bending, the hose features a steel braided core to prevent cutting and the pump head is machined from steel. With a modular construction, servicing is fast and easy, and replacement parts are available.

The pump can be fixed to masonry groundwork with a depth of 100mm. It is supplied with ground anchors and shear nuts which cannot be removed with conventional tools.

Key Features

- Extremely robust bollard style construction
- Marine grade stainless steel housing
- High-Performance pump head compatible with Presta and Schraeder valves
- Steel braided air hose core prevents cutting
- Stainless steel piston rod and handle
- Modular construction
- Tamper resistant security fittings
- Long service intervals with simple servicing procedure
- Premium brushed finish
- Durable impact resistant gauge cover
- Precision gauge with PSI and Bar units
- 400mm stroke length for fast inflation
- Delivers pressures over 100psi
- Supplied with expanding ground anchors and shear nuts

Dimensions

In Use

The precision gauge allows accurate control of tyre pressure, the pump is rated for pressures above 100psi required for road cyclists. The pump head features individual ports for Presta and Schrader type valves with a long lever for ease of use and a stamped instruction infographic.

Delivery and installation UK wide

We offer delivery and installation. Our installers are CSCS trained and are supervised by a SSSTS qualified project manager.
