

Bike Wheeling Ramp

This Bike Wheeling Ramp is a simple solution that allows you to go up or down staircases without having to carry your bike.

This award winning modern design is made from a custom aluminium profile that is specifically designed to fit all types of bicycle wheels. Unlike competitors who use steel channels, the rounded edges and moulded plastic ends on the ramp make it safer for all users of the staircase. It features durable grip tape in the channel which prevents the wheel from slipping down the ramp in wet or icy conditions.

The modular design of the Bike Wheeling Ramp allows it to be easily retrofitted onto any staircase. It also features a flip up design allowing for easy cleaning and prevents trapped waste.

Specification

200 × 73mm

Aluminium alloy* creates a durable corrosion-resistant slope

3M grip tape within channel to prevent wheels from slipping

Modular design can be extendable to for any length of staircase

Bolted down with adjustable brackets to fit any staircase angle

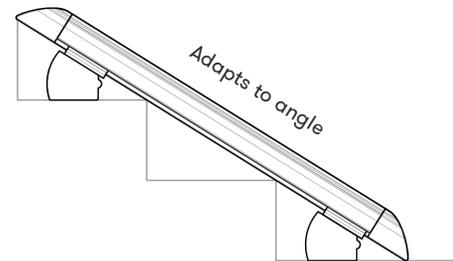

Rounded profile with moulded plastic ends make it safer for users

Lightweight aluminium components

Space for optional branding or signage

Flip up design allows for easy maintenance and removal of trapped rubbish under the ramp

Aluminium alloy* AL6N01, AL6063
